

FOUNTAIN IN PEOPLE'S PARK – DUBLIN – IRELAND

The castings of these fountains were done in Glasgow, Scotland circa 1850, so they have a wonderful history. The last refurbishment was done just after World War II.

Picture left, one of the 2 blue-white

These cast-iron fountains in the People's Park In Dublin were totally refurbished in December 2007.

Detail of the fully blasted fountain

The cast-iron has been totally blasted, then all small holes, corners and edges were spot touched up with ZINGA with a short brush, then the whole structure was protected with ZINGA and sprayed with the additional intermediate and topcoats.

View of the first fountain, completely finished.
Picture taken on 11 May 2008

You see the white angels (coating brand unknown) as well as the green chlorinated rubber final coat on the other parts.

(picture right)

An inspection was held in August 2019,
almost 12 years after application.
The white topcoat (unknown brand) on
the angels has totally disappeared.

The green chlorinated rubber coat has
also disappeared after almost 12 years.

But the remaining coating, with ZINGA
and ZINGALUFER is still intact and in
perfect condition, and no corrosion is
visible.

System: SA 2,5

ZINGA

Zingalufer

Chlorinated rubber enamel
