

SUPPORT for PHOTOVOLTAIC PANELS – SPFC – TAHITI

Since 2009, **SPFC (SOCIETE POLYNESIENNE DE FERRONNERIE ET DE COUVERTURE)** has treated over 12.000 supports for photovoltaic panels and during 3 years.

The photovoltaic cells are supported by aluminum structures and these are supported by a steel structure that has been protected with **ZINGA**.

The iron parts have been carefully isolated from the aluminum parts to avoid the formation of galvanic couples.

System:
Zinga : 2 x 60 µm DFT
